Logitech Corded-Mouse-M500, set, manual, review, SetPoint, amalgamation, driver and software Download for Windows and Mac - Logitech M500 Corded Mouse is a fast scrolling mouse to enhance owner efficiency. Almost frictionless, the scroll wheel allows you to go through long documents and web pages in one fell swoop. Or switch to click-to-click to see the checklist, slide, image, and food selection line on the right line. With 1000 dpi the precision laser overshadows the regular optical computer mouse in general. The Logitech M500Feel has smoother cursor control on almost all surfaces. Soft side handles as well as contouring designs give you more support as well as control. The Back/Ahead switch allows you to browse the website and conveniently view albums with pictures. USB plugin and play features directly out of the box, plug it in. The Logitech M500 Corded Mouse has two buttons on the left side that are configured to go forward the page as well as the web page back. You can change this using the Logitech Setpoint software app, but not Logitech video game software. The scroll wheel will certainly scroll to the left as well as to the right, as well as function effectively. If you use Setpoint, the default for the average click will be a shift task like Alt and F4, but it's much more intuitive because it shows all Windows in a much more advanced size. The computer mouse is quite satisfying and everything that feels perfect. Side switches do feel a little soft, but for a mouse for \$30, it's not something we can whine around. The Corded Computer Mouse M500 by Logitech is a USB computer mouse with an accurate 1000dpi laser sensor. The contour style provides usability when used, as well as the Forward/Backward buttons that are positioned on the side to improve navigation. Hyper-fast scrolling allows you to scroll through files and websites at an outstanding speed. You will fly through long entries as well as web pages with a single spin. Scrolling through clicks on the button gives you accuracy when navigating lists, slides, and photos. Laser precision means you'll enjoy smoother monitoring on almost any surface. The soft side holds as well as contouring forms offer you much more help as well as control of all-day convenience. Comfortable hands like comfortable computer mice. I work as a commercial-style consultant, so we're all modeling, retouching, etc., we're not just part-time COMPUTER clients who browse or use spreadsheets. I also have an M500 in your house, so I'm basically using the same mouse for about 15 hours a day. They carry the wrong use, are accurate and my hand does not burn out or hurt.
